

FIX REQUIRED: Document Upload RLS Policy Error

The Problem

You're getting this error when trying to upload documents:

```
Error: new row violates row security level
```

Root Cause: Your Supabase database has Row Level Security (RLS) enabled on the `documents` table, but no policies are defined to allow authenticated users to insert rows. This blocks all document uploads.

The Solution (5 Minutes)

You need to run a SQL migration in your Supabase dashboard to add the required RLS policies.

Step-by-Step Instructions:

1. Open the Migration File

- The migration file is located at: `supabase/migration_20251125_documents_rls.sql`
- Open this file and copy ALL of its contents

2. Access Supabase SQL Editor

1. Go to your Supabase dashboard: <https://supabase.com/dashboard>
2. Select your `patient-crm` project
3. Click on **SQL Editor** in the left sidebar
4. Click **New Query** button

3. Run the Migration

1. Paste the entire contents of `migration_20251125_documents_rls.sql` into the query editor
2. Click the **Run** button (or press Cmd/Ctrl + Enter)
3. You should see: `Success. No rows returned`

4. Verify the Fix

1. Go back to your Patient CRM application
 2. Navigate to any patient profile
 3. Go to the Documents tab
 4. Click "Upload Document"
 5. Select a file and click "Upload"
 6. **Result:** Upload should now work! ✓
-

What This Migration Does

The migration creates 4 Row Level Security policies on the `documents` table:

1. **INSERT Policy** - Allows authenticated users to upload documents
2. **SELECT Policy** - Allows authenticated users to view documents
3. **UPDATE Policy** - Allows authenticated users to edit document metadata
4. **DELETE Policy** - Allows authenticated users to delete documents

Security: All policies require authentication - anonymous users cannot access documents.

Troubleshooting

Error: “policy already exists”

✓ **This is OK!** It means the policies are already in place. You can ignore this error.

Error: “permission denied for table documents”

✗ **Solution:** Make sure you’re logged into Supabase as the project owner (the account that created the project).

Error: “relation ‘documents’ does not exist”

✗ **Solution:** You need to run the main schema first. Go to SUPABASE_SETUP.md and follow Steps 1-3 to create the database schema.

Still Not Working?

If document uploads still fail after running the migration:

1. Check RLS is enabled:

- Run this in SQL Editor:

```
sql
SELECT tablename, rowsecurity
FROM pg_tables
WHERE schemaname = 'public' AND tablename = 'documents';
```

- Should return: `rowsecurity = true`

2. Verify policies exist:

- Run this in SQL Editor:

```
sql
SELECT policyname, cmd, roles, qual, with_check
FROM pg_policies
WHERE tablename = 'documents';
```

- Should show 4 policies for INSERT, SELECT, UPDATE, DELETE

3. Check authentication:

- Make sure you’re logged into the CRM
 - Try logging out and logging back in
 - Check browser console (F12) for authentication errors
-

Quick Reference

Migration File Location:

```
supabase/migration_20251125_documents_rls.sql
```

Where to Run It:

```
Supabase Dashboard → SQL Editor → New Query → Paste → Run
```

Expected Result:

```
Success. No rows returned
```

Test Upload:

```
Patient Profile → Documents Tab → Upload Document → Select File → Upload
```

Need Help?

If you're still experiencing issues after following these steps:

1. Check the browser console (F12 → Console tab) for detailed error messages
2. Look at the Network tab to see the exact API response
3. Verify your Supabase credentials in `.env` file are correct
4. Make sure the `patient-documents` storage bucket exists and has policies set

Summary

- ✓ **Run the migration:** `supabase/migration_20251125_documents_rls.sql`
- ✓ **Where:** Supabase Dashboard → SQL Editor
- ✓ **Result:** Document uploads will work
- ✓ **Time:** Less than 5 minutes

This is a one-time fix. Once applied, document uploads will work permanently.
