

Workflow Tracking Migration Instructions

Date: November 27, 2025

Purpose: Add comprehensive workflow tracking from kit shipment to payment

CRITICAL: Run This Migration in Supabase

Before using the new workflow features, you **MUST** run the migration script in your Supabase SQL Editor.

Step-by-Step Instructions:

1. Open Supabase SQL Editor

- Go to your Supabase Dashboard: <https://app.supabase.com>
- Select your project
- Click on “SQL Editor” in the left sidebar
- Click “New Query”

2. Copy the Migration Script

- Open the file: `supabase/migration_20251127_workflow_tracking.sql`
- Copy the **entire contents** of the file

3. Paste and Execute

- Paste the SQL into the SQL Editor
- Click “Run” (or press Ctrl+Enter)
- Wait for the success message: “Success. No rows returned”

4. Verify the Migration

Run these verification queries:

```
-- Check new columns in tests table
SELECT column_name, data_type
FROM information_schema.columns
WHERE table_name = 'tests'
AND column_name IN (
    'kit_shipped_date',
    'accessioning_status',
    'sent_to_lab_date'
);

-- Check test_notes table exists
SELECT * FROM test_notes LIMIT 1;

-- Check test_notes RLS policies
SELECT policyname, cmd
FROM pg_policies
WHERE tablename = 'test_notes';
```

Expected Results:

- 3 rows showing the new columns

- test_notes table exists (even if empty)
- 4 RLS policies (INSERT, SELECT, UPDATE, DELETE)

What This Migration Adds

1. Kit Shipment & Logistics Fields

- `kit_shipped_date` - When kit was shipped TO patient
- `kit_shipment_tracking` - FedEx tracking number (TO patient)
- `kit_return_tracking` - FedEx tracking number (FROM patient)
- `kit_received_date` - When kit was received back at lab
- `kit_shipment_status` - Status: Pending, Shipped, Delivered, Returned

2. Accessioning/QC Fields

- `accessioning_status` - QC Status: Pending, Accepted, Rejected
- `accessioning_date` - When sample was accessioned (QC completed)
- `accessioning_notes` - QC notes, rejection reasons (spilled, leaked, etc.)

3. Lab Processing Fields

- `sent_to_lab_date` - When sample was sent to reference laboratory
- `results_received_date` - When results were received from lab

4. Test Notes Table

New `test_notes` table for tracking priority comments:

- Billing issues
- Insurance requests
- Code corrections
- Any other important notes

Features:

- Priority ranking: High (!!urgent!!) or Low
- User tracking (who added the note)
- Timestamps (when note was created)

5. Document Categories

- Added "Requisitions" to document categories
- Categories: Results, EOBs, Denials, Payments, Insurance Correspondence, **Requisitions**

New Features in the CRM

1. Enhanced Test Cards

Each test now displays:

-  **Shipping & Tracking** - Kit shipment details with FedEx tracking links
-  **Accessioning/QC** - Sample acceptance/rejection with notes
-  **Lab Processing** - Lab submission and results tracking

- 💰 **Billing & Payment** - Complete financial breakdown
- 📝 **Notes & Comments** - Priority notes with user tracking

2. Comprehensive Status Flow

New test statuses:

1. Kit Shipped
2. Kit Returned
3. Accessioning
4. Accepted
5. Rejected
6. Sent to Lab
7. At Lab
8. Resulted
9. Ready for Bill
10. Billed - Pending
11. Billed - Confirmed
12. Paid in Full
13. Partial Payment
14. Denied

3. FedEx Tracking Integration

- Click tracking numbers to open FedEx tracking in new tab
- Track both shipment TO patient and return FROM patient

4. Priority Notes System

- **High Priority** - Red badge with !! urgent !!
- **Low Priority** - Gray badge
- Shows who added the note and when
- Perfect for:
 - Billing issues
 - Insurance requests
 - Medical records needed
 - Code corrections
 - Partial payment follow-ups

5. Requisitions Category

- New document category for req forms
- Upload scanned requisition forms
- Organized with other categories

Workflow Dashboard (Coming Soon)

Visual pipeline showing counts at each stage:

Kit Shipped (5) → Returned (3) → Accessioning (2) → At Lab (7) → Resulted (12) → Billed (8) → Paid (15)

Troubleshooting

Error: “column already exists”

Cause: Migration was already run

Solution: This is safe to ignore. The migration uses `IF NOT EXISTS` clauses.

Error: “permission denied”

Cause: Insufficient database permissions

Solution:

1. Ensure you’re logged into Supabase as project owner
2. Try running migration from Supabase dashboard (not locally)
3. Contact Supabase support if issue persists

Error: “relation test_notes does not exist” (in app)

Cause: Migration wasn’t run yet

Solution: Complete Steps 1-3 above

Tracking buttons don’t work

Cause: Invalid tracking numbers or network issue

Solution:

1. Verify tracking number is correct
2. Check if FedEx.com is accessible
3. Try opening tracking URL manually

Next Steps After Migration

1.  **Migration Completed** - Run the SQL script
2.  **Refresh Your App** - Hard refresh (Ctrl+Shift+R or Cmd+Shift+R)
3.  **Add/Edit a Test** - Try the new fields
4.  **Add a Note** - Test the priority notes system
5.  **Upload a Requisition** - Use the new document category

Usage Tips

Quick Accessioning Workflow

1. Patient returns kit → Note “Kit Received” date
2. Open test → Go to Accessioning section
3. Click “Accepted” or “Rejected”
4. Add accessioning notes if needed (e.g., “Sample leaked”)
5. Update status to “Sent to Lab” when shipped

Priority Notes Best Practices

- **Use High Priority for:**

- Urgent billing issues
- Insurance requests with deadlines
- Claims about to deny
- Patient complaints

- **Use Low Priority for:**

- General observations
- Future follow-ups
- Informational notes

Tracking Numbers

- Always include full FedEx tracking number
- Format: 12-14 digits (e.g., 123456789012)
- Click to open FedEx tracking automatically

Support

If you encounter issues:

1. Check this document for troubleshooting
2. Verify migration was run successfully
3. Check browser console for errors (F12)
4. Review Supabase logs for database errors

Migration Script Location:

```
/supabase/migration_20251127_workflow_tracking.sql
```

Build Status:  Tested and verified

Compatibility: Works with existing data (backward compatible)
